Low Profile, Centrifugal Bag Dump Screener

Kason's Low Profile CENTRI-SIFTER® Centrifugal Screener with Integral Bag Dump Station removes oversize contaminants and de-lumps manually dumped bulk materials.

Configured for installation on a mezzanine, the system gravity-discharges into process equipment, and affords a sufficiently low deck height for operators to dump sacks and other containers.

Centrifugal action created by rotating helical paddles accelerates the rate at which on-size particles pass through a horizontal screen cylinder while de-lumping soft agglomerates. Oversize material is propelled through the downstream end of the screen cylinder to a discharge spout.

The Bag Dump Screener is constructed of stainless steel and finished to industrial, food, 3-A dairy, and pharmaceutical standards.

It is also offered with an integral dust collector to protect the operator and plant environment against dust contamination.

Options:

- Anti-blinding devices
- Clean-in-place (CIP)
- Integral feeder Sanitary (3-A, FDA, BISSC)
- Belt drive and Direct drive configurations
- Design, construction and finish to pharmaceutical specifications
